

Hässleholm Wastewater Treatment

Wastewater Treatment Plant

Sweden

Plant Description

Water from 28.600 persons, or approximately 13.300 m³ per day is treated mechanically, biologically and chemically first through a filter and subsequently in an artificial wetlands environment. The emission point is Lake Finjasjön.

In addition to Hässleholm, there are traditional three-stage water purification plants in Hästveda, Sösååla and Vinslöv.

In Vittsjö and Emmaljunga the water purification treatment is performed in ponds and wetlands, usually referred to as ecological treatment technologies.

IGSS system

The SCADA plant consists of a 2.000 objects multi-user-system with 2 operator stations.

Owner

Hässleholm Municipality.

Systemintegrator

Wepab Elkonsult AB.
